BigBlueWhaleToken

1. Introduction

The popularity of the crypto currency movement is due to the peer-to-peer networks' permissionless nature, which allows for trustless value transmission. Few assets today genuinely boost economic output, and we're largely seeing the formation of new assets that represent various self-sustaining communities with crypto currencies. The recent ascent of the Shiba Inu, which has been reduced to a meme, has demonstrated the power of storytelling. Communities desperately require their currency to serve as a means of payment, a store of value, a utility, or a unit of account in order to self-sustain.

In light of these considerations, we propose BBWT as the Bbwt Ecosystem's governance and value token. The objective of Bbwt is to transfer value and voting power to the Bbwt Community. The Bbwt DAO is how we refer to our community.

Blockchain applications aren't just for the financial industry; they've also been used in decentralized governance recently. The "Decentralized Autonomous Organization" (DAO) has evolved into a new form of collective management in which communities can be structured using a decentralized infrastructure. The blockchain can be utilized in the DAO to record member information, vote results, and financial transaction information. The DAO is run by the members themselves, with no central authority or management team. DAO is the heart of the Bbwt community.

2. Project Information

Our project is creating a BEP20 standardized Binance Smart Chain token and a community based holders have our token. Its total supply is 100 Million, and its circulating supply which is 70% of total supply is on the swap markets for now. The 10% of supply which isn't in circulate is reserved to fund the donations to animal help organizations, and the other 20% is going to be used to fund the projects that we will develop within our token ecosystem in future.

3. Problematic

The pollution in oceans is being a serious threat to sea animals. The news about pollution in seas over world, are increasing each day. We thought the best contribution to solve and help this problem, is creating a token and community which is focused on this problem. In today's world, crypto currencies take too much attention rather than the actual problems which we should focus. Because of this reason, we use this way to take attention of crypto currency community.

4. Project's Name

Blue whale is the biggest mammal of animals world. We thought that if we can help a blue whale, then we can help all animals. We used a name like this to take attention of people.

5. Project Goal

Our project's and DAO's aim is while having a value of disinflationary token, also helping animals and nature orginazations.
